DETAILED ACTION

1. Claims 1-34 are present for examination.

Allowable Subject Matter

2. Claims 1-34 are allowed.
3. The following is an examiner's statement of reasons for allowance: A search of the prior art fails to teach or render as obvious the claims as a whole and of particular note:

- a. The network having a plurality of routers for facilitating determination of the source or point of entry for a malicious packet. The router/server upon having an intrusion detection system identify a malicious packet, marks it, and generates a message queries to other routers within the packets path. The server, then, acts as a source path isolation means for isolating the packet at its source from entering the network. As recited in disclosure at page 10, para 38-39 et seq., and para 51.

- b. The closes related art is Practical network solutions for IP trace back. It discloses an IDS system for detecting potential malicious packets, while using a host and routers to trace the packet back after marking it with partial path information. It then makes use of a probabilistic or deterministic algorithm to transverse the network to ascertain its origin with the aid of near by "1 hope" away routers. This reference rejects packets that have fragmented source addresses and
